

Artificial Intelligence and the 4th Industrial Revolution

Humankind stands on the brink of a technological revolution that will fundamentally alter the way we live, work, and relate to each other. Artificial intelligence already impacts our lives with innovations such as self-driving cars and drones, virtual assistants, and chatbots that have the ability to interact with people. This programme seeks to provide delegates with an enhanced understanding and awareness of the fourth industrial revolution and the implications of this phenomenon.

Structure

This programme will be delivered over 1 day. Delegates completing the programme will receive a certificate of attendance.

Who should attend?

- Managers and directors from public and private sector
- Professionals from different industries including information technology, finance, commerce, construction and manufacturing
- Small business owners and entrepreneurs
- Junior managers
- Administrators

Upon completion of the programme, delegates should be able to:

- Understand the challenges, opportunities and the impact the 4th industrial revolution will have on business, government and people;
- Appreciate the range of new technologies that are evolving towards commercialisation; and
- Apply the acquired knowledge in the workplace context and to assist with change management initiatives relating to the implementation of new technologies.
